

FELIX OCTANIEL TELAUMBANUA

+6282372662504 | felixoctaniel05@gmail.com | <https://www.linkedin.com/in/felix-octaniel-telaumbanua-32042b28a> | <https://portofolio-felixoctaniel.vercel.app/>

Third-year Informatics student at Universitas Multimedia Nusantara specializing in Software Engineering, with a proven track record across multiple internships delivering enterprise ERP systems, fullstack web platforms, and mobile applications. Hands-on across diverse stacks (Rust, Go, Kotlin, Flutter, Next.js) plus machine learning, AI agents, and blockchain through national and international competitions. Passionate about building intelligent, high-performance software that drives real business impact.

Professional Experience

PT Vef Solution Indonesia - Gading Serpong, Tangerang, Banten

Feb 2026 - Jun 2026

Software Engineering Intern

- Developed enterprise-level ERP systems using the Frappe Framework, streamlining business processes for SMEs in the retail and manufacturing sectors.
- Engineered scalable backend services in Python and built interactive, responsive user interfaces with JavaScript.
- Designed and optimized MariaDB database schemas, ensuring data integrity and high-performance queries for financial and inventory modules.

PT Rigo Inovasi Digital (Chatrigo) - Batuceper, Kota Tangerang, Banten

Dec 2025 - Mar 2026

Fullstack Developer Intern

- Developed and maintained a high-performance chatbot and automated messaging platform using Next.js and TypeScript, ensuring type safety and optimal frontend rendering.
- Architected database schemas and server-side logic with Prisma ORM and Supabase for efficient data retrieval and real-time synchronization.
- Integrated the Xendit payment gateway and managed webhooks for automated subscription billing and payment status updates.

Universitas Multimedia Nusantara - Serpong, Tangerang, Banten

Feb 2025 - Jun 2025

Laboratory Assistant, Operating System Course

- Assisted the lecturer in practical sessions for the Operating System (CL) course and designed instructional materials covering process management, memory allocation, and file systems.
- Achieved a performance score of 97/100 ('Sangat Memuaskan') from the Laboratory Coordinator.

Game Development Club UMN - Serpong, Tangerang, Banten

Oct 2024 - Mar 2025

Programming Instructor

- Taught 2D game development fundamentals covering object behavior, collision detection, and animation scripting, and led a student team to launch a playable 2D game prototype.

Education

Universitas Multimedia Nusantara - Bachelor of Informatics

Aug 2023 - Feb 2027 (Expected)

GPA: 3.63 / 4.00

- Core coursework: Software Engineering, Web Programming, OOP, Machine Learning, Mobile Application Development, Cybersecurity, Artificial Intelligence, and IT Management, supported by hands-on projects.
- Selected for the AWS re/Start Batch 13 program (cloud computing fundamentals) and completed the Basic Leadership Training (LDK) program.

Projects

JalanAman, Community Route Safety App - Rust & Dioxus, Garuda Hacks 7.0

2026

(Safety & Resilience Track)

Fullstack Developer

- Developed a crowd-sourced safety platform for pedestrians and public transport users in Indonesia: community report map, one-tap reporting, OSRM-based route safety scoring (Safe / Caution / Avoid), and a one-tap SOS flow with local alarm, Web Push (VAPID), and email alerts.
- Built the Rust (Axum, Tokio) API with PostgreSQL and Redis, cross-platform Dioxus 0.6 frontends (WASM PWA and native Android), Redis-backed anti-abuse rate limiting, and Docker Compose plus nginx deployment.

SARFlow, AI Agent for SAR Operations Admin - Python Multi-Agent System, OpenClaw Indonesia Agenthon (2nd Place) 2026

AI Engineer (Solo, 12-hour sprint)

- Built an administrative AI copilot that turns unstructured disaster chat reports into actionable briefings through a multi-agent pipeline: intake and classification, structured extraction, RAG-based SOP compliance checks, risk briefing, append-only timeline logging, and automated draft reports.
- Integrated external context APIs (Open-Meteo, BMKG, MAGMA ESDM, PetaBencana) and designed safety guardrails enforcing human verification, source attribution, and missing-field flagging; secured 2nd Place among AI practitioners and students.

Bitlend-ICP & EduChain, Web3 Platforms - Internet Computer Protocol, World Computer Hacker League 2025 (National Round) 2025

Blockchain Developer

- Developed a DeFi lending platform (ckBTC collateral, ckUSDT borrowing) with a Rust backend canister (ic-cdk, stable structures) and a React frontend, plus Plug wallet and Internet Identity authentication.
- Built EduChain, a decentralized education platform issuing tamper-proof on-chain certificates (DIP-721 NFTs) with multi-payment support (ICP tokens, QRIS, PayPal); advanced to the WCHL National Round representing Indonesia Hub.

Patient Wait Time Prediction - Machine Learning, Final Project (LightGBM, Random Forest, Logistic Regression) 2025

ML Engineer

- Compared three algorithms for binary classification of outpatient wait times (over/under 30 minutes) on a PLOS Digital Health dataset (170k+ records), engineering domain features such as elderly priority, peak load, medical complexity, and non-linear crowd impact.
- Achieved 74.83% accuracy with LightGBM after RandomizedSearchCV tuning, applied SHAP (beeswarm and force plots) for clinical interpretability, and exported the model and scaler for mobile backend integration.

Clinic & Quick, Outpatient Hospital Queue App - Android (Kotlin), Mobile Application Programming Final Project 2025

Mobile Developer

- Built a native Kotlin Android app digitalizing hospital outpatient registration with a three-role system (Patient, Doctor, Admin): appointment booking, real-time queue status, visit history, and CRUD master data, backed by Firebase Cloud Firestore, Firebase Authentication, and a Python (Flask) REST API. Repo: github.com/felixoctanielte/Hospital-apps

Chef Roy Lesmana Academy - Fullstack Web Platform, Go & Express 2026

Fullstack Developer

- Built and deployed a paid culinary class platform to production (Ubuntu VPS, Nginx, PM2, SSL): Go (Gin) REST API with SQLite auto-migration, JWT auth with Google OAuth and email OTP, protected video streaming with per-lesson progress, manual payment verification, admin panel, forum, and PWA.

Other Projects - Selected additional work

- Balansi: local-first Flutter accounting app (Drift/SQLite, Riverpod) with journals, ledger, financial reports, audit trail, and biometric auth. AI News Portal: React + Express aggregator merging three news APIs with deduplication and search history. Steve Vegefruits: PHP/MySQL multi-role e-commerce with payment proof upload and PDF sales reports.

Organizational Experience

Digital Interaction Community UMN - President Apr 2025 - Apr 2026

- Led a technology-focused student organization for game development research and competitive programming: managed operations and competitions, and led teams building applications, websites, and community digital products.

Starlight UMN 2025 - Website Coordinator Feb 2025 - Nov 2025

- Led end-to-end development of the official Starlight UMN 2025 website featuring event info, artist lineup, ticketing, and gallery, overseeing UI/UX design, frontend implementation, and backend integration from planning to deployment.

The Global Game Jam UMN - Event Coordinator Jan 2025

- Planned and coordinated GGJ 2025, overseeing scheduling, activities, and real-time event management for a well-structured game development experience.

Skills, Achievements and Certifications

- **Languages & Frameworks:** Go, Rust, Kotlin, Dart, Python, JavaScript, Java, C#, Next.js, React, Node.js, Express, Gin, Axum, Flutter, Dioxus, Android native.
- **Data, ML & Infrastructure:** PostgreSQL, SQLite, MariaDB, Redis, Firebase, Supabase; scikit-learn, LightGBM, SHAP; AWS cloud, Docker, nginx, Git, and blockchain integration (ICP).
- **Achievements:** 2nd Place at the OpenClaw Indonesia Agenthon 2026 (SARFlow) and National Round finalist at the World Computer Hacker League 2025 representing Indonesia Hub.
- **Certifications:** HCIA-openGauss V1.0 (database architecture, SQL optimization, security, performance tuning) and HCIA-AI V3.5 (AI principles, Python for AI, computer vision, NLP, Huawei Cloud AI tools).
- **Soft Skills:** Leadership and team management, project coordination, mentoring, and clear communication across diverse academic and organizational teams.
